

warp

<https://www.warp.dev>

Warp is a modern, Rust-based terminal with AI built in so you and your team can build great software, faster.

features

- **Blocks:** A Block groups commands and outputs into one atomic unit.
- **Commands:** Suggestion, Completion, Correction, & Search
- **Notifications:** Warp can send you customizable desktop notifications when you are away from the app

- **Workflow:** A workflow is a parameterized command you can name and save in Warp with descriptions and arguments
- **AI:** AI-powered assistant that's integrated within the Warp terminal
- **More:** <https://docs.warp.dev/features>

starship

<https://starship.rs>

The minimal, blazing-fast, and infinitely customizable prompt for any shell

autojump

<https://github.com/wting/autojump>

a faster way to navigate your filesystem

Directories must be visited first before they can be jumped to.

exa

<https://the.exa.website>

A modern replacement for ls

bat

<https://github.com/sharkdp/bat>

A cat(1) clone with syntax highlighting and Git integration.

chezmoi

<https://www.chezmoi.io>

Manage your dotfiles across multiple diverse machines, **securely**

lastpass

<https://www.lastpass.com>

Easily create and store secure passwords
